PROPOSALHUB · DATA#3 IT PROFESSIONAL SERVICES

Welcome back, Jordan.

ProposalHub is where your team builds, governs, and approves client proposals — with catalogue-driven pricing, effort tracking, and a structured multi-stage approval workflow.

+ New Proposal

☰ View Proposals

📊 Dashboard

How it works

Every proposal moves through five stages — from draft to client-ready.

1 Draft

Build the proposal. Add services from the catalogue, assign resources, and set pricing baselines.

2 Submitted

When ready, submit the proposal for internal review. A notification is sent to the approvers.

3 Under Review

Approvers examine scope, effort hours, commercial pricing, and health-score compliance.

4 Approved

The proposal is signed off. If changes are needed, it is returned with structured feedback.

5 Complete

Finalised and ready to present to the client. The record is retained for auditing and benchmarking.

Catalogue-driven proposals

ProposalHub keeps estimates consistent, auditable, and commercially sound.

Service templates

Every proposal pulls from a governed catalogue of services. Pricing, effort, and activity checklists are pre-defined, keeping estimates consistent across the team.

Baseline governance

Each service defines minimum effort thresholds. The health engine flags if a proposal drifts below baseline, so under-pricing is surfaced before approval.

New proposal awaiting approval

You now have 1 proposal pending your approval. Check the Approvals queue.

LIVE PLATFORM · DATA#3 IT PROFESSIONAL SERVICES

THE BUSINESS PROBLEM

Where Pre-Sales Breaks Down

Without a governed platform, these six failures compound across every engagement.

Inconsistent Proposals

No standard structure — every team and bid is different.

Unpredictable Effort

Guesswork replaces baselines — hours drift, margins erode.

Under-Scoped Delivery

Delivery teams inherit vague, incomplete commitments.

Slow Turnaround

Manual effort and rework slow bids and reduce win rates.

No Defensible Baseline

Commercial figures lack evidence-backed rationale.

Zero Governance Visibility

No approval trails, no oversight, no accountability.

THE CONSEQUENCE

Why This Matters

Unstructured pre-sales creates a chain of problems — from bid to delivery — that compounds across every engagement.

- Margin erosion when effort is under-estimated and rework is uncoded
- Delivery teams starting unprepared with no governed scope to inherit
- No pipeline visibility — leadership cannot see where bids stand
- Approval decisions made without commercial or effort context
- No feedback loop — delivery lessons never improve future bids

THE OBJECTIVE

What We Are Setting Out to Achieve

- 01** Standardise service offerings and proposal structures across all teams
- 02** Eliminate resourcing guesswork with effort baselines and real data
- 03** Reduce proposal turnaround time through structured automation
- 04** Introduce defensible commercial and effort baselines with variance detection
- 05** Mature approval governance with tier-prioritised workflows and audit trails
- 06** Enable real-time health scoring and commercial risk assessment
- 07** Close the delivery feedback loop — capturing post-delivery insights to continuously improve future bids

THE SOLUTION

Introducing ProposalHub

Every proposal built with the same structure, scored in real-time, and governed end-to-end — from first draft to approved Statement of Work.

Service catalogue-driven proposal creation

Activity blueprints with built-in effort baselines and commercial variance detection

Tier-based approval governance with full audit trail

100 / 100
Excellent Proposal Health Score

MEASURABLE OUTCOMES

What Success Looks Like

Reduced Cycle Time

Structured automation cuts proposal turnaround materially

Margin Protection via Variance Scoring

Commercial health flags surface under-priced proposals before approval

Resourcing Accuracy

Effort baselines eliminate guesswork and reduce rework in delivery

Pipeline Predictability

Live dashboard gives leadership full visibility over bid health and volume

Continuous Improvement Cadence

Delivery feedback loops back into catalogue — each release improves baseline quality

Governance Maturity and Audit Trail

Tier-based approvals with full timestamped decision history per proposal

VALUE (AUD EX GST)

STRATEGIC VALUE

Why ProposalHub Matters Strategically

- Improves repeatability — same proposal quality regardless of who builds the bid
- Protects margin through commercial variance scoring and defensible effort baselines
- Creates real-time pipeline health visibility for leadership and senior reviewers
- Supports tier-based governance maturity and executive accountability at every approval stage
- Closes the bid-to-delivery feedback loop — turning delivery outcomes into better future proposals

Built, Shipped & Production-Ready

Every core capability delivered — end-to-end proposal management live for Data#3 IT Professional Services

DELIVERED

Guided Proposal Builder

5-step wizard — client selection, engagement details, blueprint services, WBS with health scoring, and review & finalise

DELIVERED

Multi-Stage Approval Workflow

Tier-prioritised queue with escalation to named recipients, rejection with comments, and a full immutable audit trail

DELIVERED

Branded PDF Export

Data#3 Statement of Work auto-generated from approved proposals — engagement details, scope, activities, and investment summary

DELIVERED

Client Tiering & Directory

Platinum and Gold clients fast-tracked through the approval queue — every proposal linked to a tier-tagged client record

DELIVERED

Mobile Companion App

iOS and Android — approve, escalate, and track proposals on the go with push notifications and full dark mode support

DELIVERED

RBAC, Reporting & Audit

5 system roles with granular permissions, admin business insights, pipeline trends, and an immutable change history

 **Release Notes**
ProposalHub change log — internal build history

Download PDF

○ **v0.9.0** Latest

13 Apr 2026

feat

Escalate to a named recipient — approvers can now select a specific user when escalating a proposal for review

feat

Commencement and required-by dates added to proposals — editable timeline displayed on detail page and in PDF export

feat

PDF Activities & Effort section unified — single table showing component, role, daily rate, hours, and total investment

feat

Platform added as an engagement type across proposal creation and catalogues

fix

Commercials variance progress bar and text colours corrected for negative variances

fix

Cost override now correctly applies and clears without triggering undefined proposal errors

fix

Proposal creation and save-draft flow stabilised — errors now surface via toast notifications

○ **v0.8.0**

13 Apr 2026

feat

Super User role added as default demo identity across web and mobile platforms (Alex Chen)
